

Raspadskaya Days, a large-scale career guidance event for young people, started in Novokuznetsk

February 12, 2025. - The annual career guidance event “Raspadskaya Days” organized by Raspadskaya Coal Company (RUC) started today at the Siberian State Industrial University (SibGIU). On February 12-13, schoolchildren and students from the south of Kuzbass will have an opportunity to get acquainted with modern technologies of the coal industry, take part in interactive quests, quizzes and trainings, as well as learn more about in-demand professions in the mining industry.

At the interactive exhibition the participants of the event could see the latest achievements of the company in the field of coal mining and preparation, ecology, technological transportation and engineering. The young people were particularly interested in machine vision systems and industrial quadcopters, which are actively used in production. These technologies not only demonstrate the high level of automation and digitalization of the coal industry, but also open new horizons for future specialists.

Raspadskaya Days participants had an opportunity to take virtual tours of the coal preparation plant and coal mine, which allowed them to immerse themselves in the real conditions of the mining industry. Vocational guidance tests and a miner's quiz were organized for schoolchildren and students, which helped them better understand their interests and inclinations towards technical specialties.

Special attention was paid to the third-year students of SibGIU, studying in the specialty “Mining Engineering”. They were solemnly initiated into miners, a traditional event that symbolizes the beginning of their professional path in the coal industry.

“Raspadskaya Days” in SibGIU is a vivid example of successful interaction between science, education and industry. Raspadskaya Coal Company actively supports the development of engineering education and natural sciences in the region. In partnership with SibGIU, over the last two years the company has opened engineering classes in Mezhdurechensk and Osinniki, where schoolchildren receive in-depth knowledge of technical specialties and get acquainted with promising professions.

About the Company

Raspadskaya Group comprises enterprises of a single territorial production complex in the Kemerovo Region and the Republic of Tyva in the Russian Federation: eight mines, two open-pit mines, three coal preparation plants, transportation and production infrastructure. Raspadskaya Coal Company is one of the leaders in industrial safety, digitalization of production, reduction of environmental impact and improvement of working conditions.
