

A new longwall face has been commissioned at Rospadskaya mine

December 27, 2024 - A new longwall face with commercial reserves of over 3 million tons of coal was commissioned at Rospadskaya mine of Rospadskaya Coal Company (RUC).

Preparation of the longwall face lasted more than a year. The entire range of mining, sinking and installation works was performed. Five brigades of preparatory sections passed about 7 kilometers of mine workings.

The length of the new longwall face is 300 meters. Special attention was paid to industrial safety. An aerogas control system has been installed. All technological processes are monitored 24 hours a day online, including with the help of digital machine vision technologies. The entire length of the slaughterhouse is equipped with video surveillance cameras.

Coal reserves are mined at a depth of 620 meters. Experienced team of mining section No. 17 under the leadership of foreman Dmitry Reshetnikov works in the face. A modern mechanized cleaning complex is installed in the face.

The miners of Rospadskaya mine plan to develop the reserves of the new longwall face within a year and a half.

About the Company

Rospadskaya Group comprises enterprises of a single territorial production complex in the Kemerovo Region and the Republic of Tyva in the Russian Federation: eight mines, two open-pit mines, three coal preparation plants, transportation and production infrastructure. Rospadskaya Coal Company is one of the leaders in industrial safety, digitalization of production, reduction of environmental impact and improvement of working conditions.
