

Raspadskaya Mine: 50 years of leadership in the Russian coal market

December 8, 2023 - Raspadskaya Mine celebrated its 50th anniversary. The main celebration in honor of the company's anniversary took place in the Raspadsky Cultural Center. Employees and veterans of the mine were congratulated by Vladimir Melnichenko, General Director of Raspadskaya Coal Company (RUC), Andrey Panov, Deputy Governor of Kuzbass, and Sergey Perepilishchenko, Head of Mezhdurechensk. The mine's 50 best employees were honored with federal and regional awards.

"Raspadskaya" is a flagship in the Russian production of high quality coking coal. The mine employs over 2,300 people, its depth is about 700 meters, the length of active mine workings is over 130 kilometers. In total, over 280 million tons of coal have been mined in the history of the enterprise.

The mine accounts for about 25% of the total production of RUC, being the main asset of the company. The latest machinery and equipment are used in mining operations. Raspadskaya is one of the leaders in the Russian coal industry in terms of mechanization and automation of production processes.

Special attention is paid to industrial safety. The company uses a multifunctional system combining aerological and fire safety, a system for determining the location of personnel in the mine workings and much more.

The enterprise actively develops and implements modern digital projects related to all main production areas - coal mining, preparation of mine workings, industrial safety, control and planning. There are Wi-Fi access points in mine workings, thanks to which mining operations are monitored in real time. Video surveillance systems, digital machine vision technologies, various equipment control sensors and aerogas control help to monitor technological processes underground.

Raspadskaya mine has been implementing one of the company's largest investment projects, Raspadsky-4, since 2023. As part of the anniversary, a modern complex of domestic wastewater treatment facilities was commissioned. By 2027, the company will build another complex of buildings and facilities, as well as more than 20 km of underground mine workings to mine seams with coal reserves of over 60 million tons. The project has been developed taking into account the most modern coal mining technologies - using the latest mining equipment and digital solutions.

In honor of the company's anniversary, Raspadskaya Coal Company prepared many gifts for the mine's employees and residents of Mezhdurechensk. Thus, a real winter fairy tale with a six-meter slide, a warm rental pavilion and photo zones appeared on the main town square with the support of coal miners. Two festive expositions were opened in the Raspadsky Culture Center. One of the expositions tells about the most significant stages in the history of the enterprise, its formation and development. The second exhibition features portraits of modern miners and mine workers. All residents of Mezhdurechensk will be able to see them: the company donated these expositions to the fund of the city exhibition hall.

About the Company

Raspadskaya Group comprises enterprises of a single territorial production complex in the Kemerovo Region and the Tyva Republic of the Russian Federation: eight mines, two open-pit mines, three enrichment plants, transportation and production infrastructure companies.
